SUBGELLULAR LOCATION: Type I membrane protein.
TISSUE SPECIFICITY: Expressed specifically in testis.
TISSUE SPECIFICITY: Expressed specifically in testis.
DOMAIN: A tripeptide motif (TDE) within disintegrin-like domain could mediate sperim/egg binding to egg integrin receptor and thus prim: The signal and the metalloprotease domain are cleaved during the epididymal maturation of the spermatozoa (By similarity).
SIMILARITY: Contains 1 disintegrin domain.
SIMILARITY: Contains 1 EGF-like domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 complex.";

Pulorizous. Sperm surface membrane protein that may be involved in aperm-egg plasma membrane adhesion and fusion during fertilization. Could have a direct role in sperm-zona binding or migration of sperm form the uterus into the oviduct. Interactions with egg membrane could be mediated via binding between its dishitegrin-like domain to one or more integrins receptors on the egg. This is a non catalytic metalloprotease-like protein (By similarity).

SUBCELLULAR LOCATION: Type I membrane protein.
TISSUE SPECIFICITY: Expressed specifically in testis.
TISSUE SPECIFICITY: Expressed specifically in testis.
DOMAIN: A tripeptide motif (VGB) within disintegrin-like domain could mediate sperim-degg binding (By similarity).
First The signal and the metalloprotease domain are cleaved during the epididymal maturation of the spermatozoa (By similarity).
SIMILARITY: Contains I disintegrin domain.
SIMILARITY: Contains I EGF-like domain.
                                                                                                                                                                                                                                  MEDLINE=97071141; PubMed=8914066;

-I FUNCTION: Sperm surface membrane protein that may be involved in sperm-egg plasma membrane adhesion and fusion during fertilization. Could have a direct role in sperm-zona binding or migration of sperm from the uterus into the oviduct. Interactions with egg membrane could be mediated via binding between its disintegrin-like domain to one or more integrins receptors on the egg. This is a non catalytic metalloprotease-like protein (By similarity).

"Macaque MDC family of proteins: sequence analysis, tissue
distribution and processing in the male reproductive tract.";
Mol. Hum. Reprod. 4:429-437 (1998).

-1- FUNCTION: Sperm surface membrane protein that may be involved in
spermatogenesis and fertilization. This is a non catalytic
metalloprocease-like protein (By similarity).

-1- SUBCELLULAR LOCATION: Type I membrane protein.

-1- SUBCELLULAR LOCATION: Type I membrane protein.

-1- TISSUE SPECTICITY: Expressed predominantly in adult and
prepubertal testis.

-1- DOMAIN: A tripeptide motif (ECD) within disintegrin-like domain
could be involved in the binding (By similarity).

-1- PTM: The prodomain and the metalloprotease-like domain are cleaved
during the epididymal maturation of the spermatozoa.

-1- SIMILARITY: Contains I EGF-like domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       28-FEB-2003 (Rel. 41, Created)
28-FEB-2003 (Rel. 41, Last sequence update)

ADAM 18 precursor (A disintegrin and metalloproteinase domain 18)
(Transmembrane metalloproteinase-like, disintegrin-like, and cysteine-
rich protein III) (tMDC III).
Name-ADAM18; Synonyms-TMDC3;
Macaca fascicularis (Crab eating macaque) (Cynomolgus monkey).
Eukaryota; Metazoa; Chordats; Craniata; Vertebrata; Euteleostomi;
Mammalia; Eutheria; Primates; Catarrhini; Cercopithecidae;

SUBCELLULAR LOCATION: Type I membrane protein.

TISSUB SPECIFICITY: Expressed specifically in testis.

DOMAIN: A tripeptide motif (ECD) within disintegrin-like domain could be involved in the binding to egg integrin receptor and thus could mediate sperm/egg binding (By similarity).

PTM: The prodomain and the metalloprotease-like domain are cleaved during the epididymal maturation of the spermatozoa (By
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     (Potential).
